

## Industry cares for Safety

... because we all want to help...  
... because every detail counts...

Since the beginning of the health crisis, a global race against the clock has been going on to develop more and better personal protection against the Covid-19 virus. Due to the restrictions to manage the pandemic, some industries were forced to temporarily reduce or even stop their production. But often the machinery and equipment is capable of contributing to society and the economy in another way. Some companies are therefore adapting their business so that they can help in the production of personal protective equipment.

**Avery Dennison is equipped to develop, produce and supply adhesive tapes and foams for face masks and face shields within a very short timeframe and in large quantities.**

### Application examples

- Customers in automotive converting:** In the face mask, a foam is provided at the level of the nasal bridge to protect the nose. To attach this foam to the mask, a durable tape from Avery Dennison with strong adhesion strength is applied.
- Customers in general converting:** Face masks with a metal nose piece to better 'shape' the mask and make it fit closer around the nose. Avery Dennison provides the tape that attaches the metal piece to the face mask.
- Customers in automotive supply:** To protect the face, facial shields are very frequently used in hospitals. A foam at the top of the shield ensures that the mask fits well and is comfortable to wear. Avery Dennison has a suitable tape with strong adhesion and the required performance for this application.
