

Avery Dennison Performance Tapes Pressure-sensitive Adhesives for Acoustic Wall Coverings

Felts, fibres and foams, made from various materials and available in tiles or wall applications, are applied on walls to enhance both the looks and the acoustic comfort of a room. They are laminated with a self-adhesive backing which enables a simple and quick installation.

The tapes adhered to this backing, are a clean solution to mount these, as they rule out the use of any nails or mechanical fasteners, while providing sufficient shear strength for the application.

Tapes are also recommended over liquid adhesives, for their constant layer thickness, which is easier to standardize, and because they don't require curing time.

The tape is adherable to various wall substrates and can provide permanent as well as removable properties.

Easy: Peel and stick application, preventing foam stretching. Convenient to laminate to common felts, fibres and foams.

Fast: Provides immediate tack and requires no cure time.

Sustainable: Developed for long aging performance. Cleanly removable when required.

Product Range Details

	FT 117 FT 167	FT 168	FT 666 180µm (excl. liner)	FT 7956 70µm (excl.liner)
Liner	White glassine	Havana glassine	Havana glassine	Havana glassine
Adhesive 1	62 µm synthetic hotmelt rubber	130 µm synthetic hotmelt rubber	Synthetic hotmelt rubber	Synthetic rubber with good shear properties
Carrier	N/A	N/A	Polyester scrim	Polyester scrim
Adhesive 2	N/A	N/A	Synthetic hotmelt rubber	Synthetic hotmelt rubber

Product Features & Benefits

Features	Benefits
High bond strength & high tack	Easy to apply, with no curing time. Allows strong bonding to various wall substrates. Certain wall substrates may require priming.
Good peel & aging resistance	Long term bonding, aging resistant
Dimensional stability	A scrim prevents stretching of the material during application
Customizable	Temporary and permanent fixing solutions
