

Make your panels installer-ready

Pressure-sensitive adhesive solutions for flexible hygienic and antimicrobial wall cladding

Your customers expect fast, clean, and reliable installations. Our pressure-sensitive adhesive tapes help you meet that expectation by turning your panels into a ready-to-install solution.

No mixing. No curing. No mess on the job site.

Why panel manufacturers choose PSA

Liquid adhesives have long been the standard for bonding hygienic wall cladding. But they come with real costs: application time, skilled labor, job site cleanup, and the risk of inconsistent bonding results. PSA tapes eliminate these variables.

Three key benefits

By laminating Avery Dennison tapes to the back of PVC or FRP/GRP panels or -cladding, you hand your customers a faster and cleaner installation method.

Faster installation

PSA panels require no mixing, no cleanup, and no open time to respect. Installers align, peel and bond, that's it. Switching from liquid adhesives to PSA significantly reduces installation time, so your customers can complete jobs faster and move on to the next.

Lower total cost

Less time on site means lower labor costs for your customers. PSA eliminates the need for specialist applicators and reduces the risk of rework, making your panels a more cost-effective choice for contractors and facility managers.

Consistent, high-performance bonding

Avery Dennison tapes deliver reliable adhesion to PVC and FRP substrates across hygienic environments including food processing, pharmaceutical, and healthcare facilities. Performance remains stable even in demanding conditions: humidity, temperature variation, and rigorous cleaning cycles.

Attachment of finishes and accessories

No story is complete unless the complete job is done. The attachment of various finishes, like profiles, bumper strips, wall protection or signage can be completed right after the wall cladding, with the same swift and reliable performance of pressure-sensitive technology.

The right tape for your panel

Avery Dennison offers a range of PSA solutions for flexible hygienic wall cladding, suitable for both PVC and FRP/GRP substrates.

Product	Key features	Best suited for
FMM2757	Double coated PE Foam, acrylic adhesive, paper liner	Flexible cladding, flat to rough surfaces
FM503P	Double coated PE Foam, acrylic adhesive, plastic liner	Flexible cladding, flat to rough surfaces
FMM1705	Double coated PE Foam, rubber adhesive, paper liner	Low surface energy materials
FT168	Hotmelt rubber adhesive, Havana glassine liner	Lightweight cladding, precision applications, flat surfaces

Whether you produce flexible PVC sheets or semi-rigid FRP panels, Avery Dennison Performance Tapes has a solution that fits your process and your customers’ needs.

Low VOC: better for people and for compliance

Hygienic and cleanroom environments place strict demands on indoor air quality. Unlike solvent-based liquid adhesives, Avery Dennison PSA tapes emit no volatile organic compounds (VOC) during or after application. There are no solvent vapors to clear, no mandatory ventilation periods and no odor concerns for occupants. Rooms can be returned to use immediately after installation, a critical advantage in food processing, pharmaceutical and healthcare facilities. Low VOC performance also supports compliance with HACCP requirements and cleanroom specifications.

Ready to make your panels installer-ready?

Contact our team for application advice, sample requests, or a technical consultation.

Our technical experts are here to show you how to work with your materials successfully during every phase of your application. You can count on us to approach any challenge with genuine curiosity and care.
